

Abstract of the Disclosure

The present invention is an interactive system and method whereby participants may engage in a contest that is simultaneously or subsequently broadcast. The broadcast signal may be for the purpose of a pure entertainment source or may be an enticement to play the shown or other interactive games. The games may be computer simulation games, role-playing games, strategy games, question and answer games, casino games, or other games as desired. The broadcast signals may show a specialized view of the game being played and may contain live commentary or other enhancements. The games may be played with set top boxes connected to a television, a broadcast network, and a server system.
